

Set of SPARQL queries
 Dataset visualization based on type-property paths.

http://lod2-dev.vse.cz/LODSight

Showing the dataset summary. Interactively. Just with SPARQL.

- As a graph of **typical class/property/datatype combinations**.
- **See vocab. usage**: nodes are color coded by namespace.

- **Changing the level of detail** to see only more frequent combinations.
- Retrieving **example instantiations** of a selected subgraph.

Needs just SPARQL endpoint access.

Web app ready to use.

100 million triples summarized in 5 minutes.

Works on 50% of endpoints. But there are workarounds!

Just another RDF dataset visualization app? Come and see the demo to decide yourself.
